Bharath Dibbadahalli Hanumanthappa

bharhanu@terpmail.umd.edu | (240) 432-7015 | LinkedIn | Medium | Portfolio | GitHub

EDUCATION

University of Maryland — College Park, MD
Master of Engineering, Cybersecurity | *GPA: 3.8* — *May 2026*
Relevant Courses: Digital Forensics & Incident Response, Penetration Testing, Cloud Security, Information Assurance

PES University — Bengaluru, India
Bachelor of Technology, Computer Science and Engineering — *May 2024*
Relevant Courses: Computer Network Security, Applied Cryptography, Information Security, Blockchain

TECHNICAL SKILLS

Languages & Automation: Python, Bash, SQL, REST APIs, Flask, Docker
Cloud & AI Security: AWS (EC2, S3, IAM), Amazon Bedrock, Zero Trust Architecture
Threat Intel & OSINT: MISP, AlienVault OTX, VirusTotal, MITRE ATT&CK, Maltego, STIX 2.1
Network & Offensive Security: Suricata IPS, pfSense, Wireshark, Snort, Nmap, Metasploit, Nessus
SIEM & Forensics: Splunk Enterprise, Sysmon, Windows Event Logs, Linux/Bash Logging, Volatility
Frameworks & Standards: HIPAA, NIST RMF, PCI-DSS, CMMC, GDPR, RBAC, MFA

PROFESSIONAL EXPERIENCE

Resilience, Inc — Remote, United States
Vulnerability Management Analyst — *September 2026 – Present*
- Automated vulnerability scanning routines across enterprise endpoints using Nessus, analyzing scan telemetry to detect unpatched OS vulnerabilities, policy deviations, and misconfigurations.
- Triaged and prioritized newly published CVEs by correlating CVSS severity with threat intelligence and asset criticality, accelerating patch prioritization for high-risk systems.
- Enforced patch deployment tracking and audited CIS benchmark security-hardening baselines across server infrastructure in coordination with system administration teams.

ActiveBytes Innovations — Bengaluru, India
Cybersecurity Analyst — *Jan 2024 – June 2024*
- Engineered a multi-node Python honeypot network that intercepted active credential-stuffing attacks, mapping 15+ adversarial TTPs to the MITRE ATT&CK framework for threat attribution.
- Constructed a Python log-parsing pipeline with statistical anomaly detection, filtering benign baseline events to cut SOC alert noise by 55% and prioritize actionable incidents.
- Developed a centralized threat dashboard correlating live honeypot telemetry with CTI indicators, cutting Mean Time to Detect (MTTD) by 25% and analyst triage time by 60%.

PROJECTS

Ugroza: AI Assisted Threat Intelligence Platform
- Engineered an automated CTI platform aggregating parallel OSINT feeds (MITRE ATT&CK, Mandiant) and integrating Amazon Bedrock (Llama 3.1) to generate source-cited threat dossiers in under 4 minutes.
- Designed a deterministic extraction engine utilizing regex JSON repair and SQLite caching, eliminating LLM hallucinations while maintaining a 100% auditable source trail.
- Built a Streamlit interface featuring configurable telemetry scopes, state persistence, and depth controls to consolidate fragmented threat actor profiling workflows.

pfSense & Splunk SIEM Security Lab
- Architected an isolated virtual enterprise sandbox (VMware) using pfSense firewalls to segment external attacker networks (Kali) from internal endpoints (Windows).
- Deployed Suricata IPS on pfSense WAN interfaces to analyze packet payloads, automatically blocking stealthy Nmap SYN scans and dynamically updating firewall drop rules.
- Ingested pfSense and Suricata network telemetry into Splunk Enterprise, writing custom Regular Expressions (regex) and SPL queries to detect automated scanning and extract IoCs.

EASM & Threat Intel Dashboard
- Engineered a multi-threaded Python EASM tool using ThreadPoolExecutor to execute concurrent passive reconnaissance across CT logs (crt.sh), Shodan APIs, TLS handshakes, and GitHub repositories, generating a 0–100 weighted risk score to quantify exposure.
- Authored a STIX 2.1 export engine paired with AWS Bedrock streaming APIs to generate MITRE ATT&CK-mapped risk summaries and output structured threat objects (domain-name, ipv4, indicator) for direct ingestion into SIEM, SOAR, and TIP platforms.

CERTIFICATION & ACTIVITIES

- **Security+** (In Progress) – CompTIA, 2026
- **Practical OSINT Research Professional** – TCM Security, 2025
- **Threat Intelligence Research** – Medium | Published CTI analyses of Storm-1175, UNC1069, Scattered Spider, and Star Blizzard campaigns using structured intelligence methodology.
