EDUCATION

University of Maryland

Master of Engineering, Cybersecurity | GPA: 3.8

Relevant Courses: Digital Forensics & Incident Response, Penetration Testing, Cloud Security, Information Assurance

College Park, MD

May 2026

PES University

Bachelor of Technology, Computer Science and Engineering

Relevant Courses: Computer Network Security, Applied Cryptography, Information Security, Blockchain

Bengaluru, India

May 2024

TECHNICAL SKILLS

SIEM & Log Analysis: Splunk, Windows Event Logs, Sysmon, Linux/Bash Log Analysis

Network & Offensive Security: Suricata, Wireshark, Snort, Nmap, Metasploit, Nessus, Firewalls/ACLs, Web Proxies

Incident Response & Forensics: Autopsy, Foremost, FTK, Volatility, Cellebrite, Phishing Analysis, Malware Triage

Threat Intelligence: MISP, AlienVault OTX, VirusTotal, MITRE ATT&CK, OSINT Frameworks, Maltego

Frameworks & Standards: HIPAA, NIST RMF, NIST SP 800-series, PCI-DSS, CMMC, GDPR, RBAC, MFA

Languages & DevOps: Python, Bash, C, Java, SQL | Docker, Jenkins, Flask

Cloud & Architecture: AWS (EC2, S3, IAM - Coursework), Zero Trust Principles, Amazon Bedrock

PROFESSIONAL EXPERIENCE

Guardian Group (Project 1591)

OSINT Analyst

Remote, United States

May 2026 – Present

- Conducted anti-human-trafficking investigations using OSINT tradecraft and vetted OpSec protocols, producing structured intelligence reports escalated directly to federal law enforcement for case action.
- Verified age indicators by applying open-source research methodologies to analyze 100+ commercial sex advertisements, generating verified identity intelligence that strengthened victim-identification efforts.
- Shortened investigation cycle times by 15% through cross-referencing subject aliases via public records and SOCMINT, compiling comprehensive identity profiles.

ActiveBytes Innovations

Cybersecurity Analyst

Bengaluru, India

Jan 2024 – June 2024

- Deployed a honeypot network using custom Python scripts to isolate and log credential-stuffing attack patterns, mapping adversarial TTPs to the MITRE ATT&CK framework to inform automated response playbooks.
- Configured a data pipeline processing ~50,000 monthly security events with anomaly-detection logic, reducing alert noise by filtering baseline events and surfacing high-priority incidents for the SOC team.
- Built a centralized monitoring dashboard correlating live honeypot triggers with threat intelligence indicators, streamlining the incident triage process and reducing mean time to detection.

PROJECTS

[Ugroza: AI Assisted Threat Intelligence Platform](#)

- Built a modular cyber threat intelligence platform using parallel OSINT aggregation across MITRE ATT&CK, Mandiant, and other trusted sources, combined with Amazon Bedrock (Llama 3.1), to generate source-backed threat dossiers in under 4 minutes.
- Designed a deterministic extraction pipeline using Amazon Bedrock, regex-based JSON repair, and dual-payload SQLite caching to eliminate hallucinations while preserving a fully auditable source trail.
- Unified fragmented OSINT workflows into a Streamlit interface with configurable telemetry scopes, search-depth controls, and persistent state, accelerating threat actor profiling from trusted intelligence sources.

[pfSense & Splunk SIEM Security Lab](#)

- Designed an isolated enterprise sandbox using VMware and pfSense to segment a Kali Linux attacker from an internal Windows endpoint, resulting in a secure testing environment free of physical network leakage.
- Deployed the Suricata IPS package on the pfSense WAN interface to monitor incoming traffic payloads, successfully intercepting stealthy Nmap SYN scans and dynamically placing adversarial IPs into the firewall's block table.
- Forwarded raw telemetry into Splunk Enterprise, writing custom Regular Expressions to isolate indicators of compromise (IoCs) and identify stealthy automated scanning patterns.

[EASM & Threat Intel Dashboard](#)

- Developed a Python-based EASM tool integrating GitHub and AlienVault REST APIs to automate subdomain enumeration and credential discovery, reducing manual reconnaissance effort by over 80%.
- Integrated a local Phi-3 model for offline analysis of reconnaissance data and built data normalization/deduplication pipelines to aggregate live scans, code leaks, and threat intelligence into a unified Streamlit dashboard while reducing false-positive alerts.

CERTIFICATION & ACTIVITIES

[Practical OSINT Research Professional](#) – TCM Security, 2025
